

SCRIP

ASCEND

STRUCTURED BEHAVIORAL INTEGRATED SYSTEM - ADULTS 26+

ASCEND is SCRIP's standardized, trauma-informed behavioral intervention system. It combines structured learning, professional facilitation, clinical collaboration, documentation, and outcome measurement so growth is supported and observed - not assumed.

What the pathway provides

- Nine-chapter behavioral curriculum
- Trained and certified facilitators with clear professional roles
- Clinical integration and one-to-one therapeutic support where applicable
- Pre/post assessments, weekly surveys, observation, and session documentation
- Financial literacy, career development, mentoring, and stability planning
- Implementation support, quality assurance, and outcome reporting

The ASCEND difference

Facilitators teach and document, clinicians interpret and intervene within their scope, and case managers connect participants to practical supports. Each role remains clear while the team works toward shared outcomes.

Transformation requires more than attendance. ASCEND creates a structured pathway from insight to measurable change.
