

Impact & Evaluation Overview

HOW SCRIP DOCUMENTS GROWTH AND OUTCOMES

SCRIP combines program participation data, structured assessments, weekly feedback, professional observation, and follow-up information to understand how participants grow and where additional support is needed.

What the pathway provides

- 84% remain home
- 64% employed
- Pre/post assessments and trauma-related measures
- Weekly participant surveys and facilitator session logs
- Observation forms, therapist documentation, and cohort tracking
- Outcome reports that connect program activity to participant progress

Responsible use of results

Public outcome figures provide a clear picture of SCRIP's reported impact. Partner and funder reports can include additional context such as cohort size, measurement period, definitions, limitations, and evaluation findings.

What the information supports

Program improvement, professional collaboration, funder accountability, implementation quality, and better decisions about participant support.

SCRIP measures more than whether someone completed a class. We document how change takes place.
